EDUCATION

University of Wisconsin-Madison **May 2019**
Bachelor of Science in Computer Science

EXPERIENCE

Nextek **November 2020 – October 2025**
Junior Software Engineer
Shoreview, MN

- Contributed to a high-traffic sales acceleration platform serving 3M+ clients, focusing on the development and maintenance of core .NET backend services to ensure 99.9% platform uptime.
- Leveraged Microsoft Azure for sprint management and continuous monitoring; utilized Azure DevOps logs and metrics to identify performance bottlenecks and proactively resolve production issues.
- Collaborated with mid-level and senior software engineers on code reviews and deployment approvals, ensuring all production level C# code met strict enterprise standards.
- Partnered with project owners and cross-functional engineering teams to translate business requirements into technical specifications, reducing operational process complexity through iterative software refinements.
- Owned, designed and maintained full-stack internal applications using Laravel and JavaScript to automate operational workflows for financial services professionals and company employees.

Equus Computer Systems **June 2019 – September 2020**
Associate Solutions Engineer
Golden Valley, MN

- Designed and developed a real-time server monitoring utility in a data center, improving hardware failure detection speed and enhancing system reliability during testing.
- Engineered a temperature monitoring system with automated server shutdown logic, reducing the risk of damage to lab equipment.
- Built a web-based training platform that reduced the onboarding time for production engineers by 20%, integrating visual guides for server assembly.
- Utilized Postman to automate API testing processes and identify early-stage bugs, reducing pre-deployment issues by 30%.

PROJECTS

Nourishr
Technologies: Vue.js, Laravel, Tailwind, MySQL

- Built a responsive, accessible interface using Vue, prioritizing clean component architecture and reusability.
- Integrated Inertia.js to handle server-side state within a single-page application environment, providing a smooth, user experience.

Personal Portfolio Website
Technologies: Gatsby, Tailwind, Arcjet

- Designed and developed a full-stack portfolio application to showcase projects, skills, and technical experience.
- Built reusable UI components and responsive layouts for optimal performance across devices.
- Deployed on Netlify with 1s average load times across all routes.

TECHNICAL SKILLS

Programming Languages: PHP, C#, JavaScript, SQL, Bash, HTML, CSS
Frameworks and Tools: Laravel, Vue.js, .NET, Alpine.js, Gatsby, Git, Azure DevOps, Postman, Tailwind
Concepts: Database Management, MVC Architecture, RESTful APIs, CI/CD
